

LERMOND POND

Hope, Twp., Knox County
U.S.G.S. West Rockport, Maine

Fishes

Brown trout	Chain pickerel
Brook trout	Minnows
Rainbow smelt	White sucker
Smallmouth bass	Hornpout (bullhead)
White perch	Sunfish
Yellow perch	American eel

Physical Characteristics

Area - 171 acres

Maximum depth - 30 feet

Temperatures:

Surface - 69⁰F

27 feet - 66⁰F

Principal fisheries: Smallmouth bass, chain pickerel, white perch

Lermond Pond is warm and shallow containing no cold well-oxygenated water suitable for salmonids. Brown trout were stocked but when they failed to provide an adequate sport fishery the program was terminated. Occasional brown trout and brook trout are now caught; these dropped down from Alford Lake.

A very sizable white perch population exists which can at times provide fast fishing. Smallmouth bass were first reported in 1980 and now support a fair sport fishery.

A boat launch facility is located at the dam at Mill Stream.

Surveyed - August, 1941

Revised - 1953, 2000
